---

Tēnā koe, Norm

I note I did not include the actual design layout in my previous email – please see attached. Fill Areas 2-4 are proposed for both overburden disposal and importation of managed fill; Fill Area 5 is for overburden disposal only. These are yet to be refined by geotechnical analysis, so are pretty rough at this stage.

It would be great to meet with Hori Awa as soon as we can ☺ thanks

kate

Kia ora Kate. Thank you for the email.
I will arrange a meeting with Hori Awa from Waahi Whaanui Trust to update him so we can progress this project.
I will keep in touch.
Norm

Kia Ora Norm,

I hope it is as beautiful day in the Waikato today as it is in Auckland :)

Attached is the most up to date plan for the proposed areas of fill at the Gleeson Quarry in Raahui Pookeeka. The geotechnical experts are working on cross-sections and more detailed plans.

Fill areas 2-4 are proposed for both managed fill and overburden, whereas Fill area 5 is proposed for overburden only.

On behalf of Gleeson Quarries Huntly, I would like to request a Cultural Impact Assessment for this proposal. I attach an initial scope of works (which will need refining). It would also be good to address the regional consents that require renewal in July 2020, in particular relating to the existing 1200m³/per day water take, and the water discharge consent into the Waikato River.

If you would advise how to formally get this process underway we would be most appreciative. The quarry is still keen to undertake cultural inductions and meet with leaders within the Waahi Whaanui Trust over the next while, with your guidance and facilitation.

Kind Regards,
Kate Madsen
