Baird Avenue Stormwater Network Investigation and Outlet Renewal

Following a customer service request, investigations identified that parts of the existing stormwater network were not accurately recorded within Council's GIS system. CCTV investigations were undertaken to locate and remove blockages and to verify the existing network layout.

The stormwater outlet where the pipe discharges to the open drain was cleaned to improve network performance and ensure the system is operating as intended. Ongoing investigations and network mapping are continuing.

The damaged stormwater outlet pipe has now been replaced with a new pipe. Erosion protection works have also been completed around the outlet to reduce the risk of slips and improve long-term ground stability.

The damaged stormwater outlet pipe was replaced with a new pipe. Erosion protection works were also completed around the outlet to reduce the risk of slips and improve ground stability.

Mahi Road Stormwater Upgrade

Construction of the Mahi Road Stormwater Upgrade continues to progress well. Larger 1350mm and 1200mm stormwater pipes have been successfully installed within the dog park area, along with the outlet structure.

Some sections of the existing water main along Mahi Road require relocation before the next stage of stormwater pipe installation can proceed, as the current water main conflicts with the proposed stormwater alignment. Design work for the relocation is currently being finalised in conjunction with the water planning team.

Ground conditions in parts of the site have been poorer than anticipated, requiring additional excavation and undercutting to provide suitable bedding for the new pipes. While this has resulted in additional construction activities, the project remains on track and is progressing in accordance with the overall programme.

Upcoming works include installation of the upstream stormwater pipework following completion of the water main relocation. The project team is also working closely with WEL Networks to manage several conflicts with underground high-voltage assets and confirm the final infrastructure alignment.

Community impacts have been minimal, with no significant negative feedback received. Users of the dog park have generally responded positively to the temporary fencing and site management measures currently in place.

The project is currently programmed for completion in June 2027. Most of the stormwater pipe installation works are expected to be completed by November 2026. However, the open drain works, landscaping, and associated reinstatement activities will take additional time to complete. Planting cannot be undertaken during the summer months due to the high risk of establishment losses, so these works are scheduled for the following planting season.
