

1966

2020

The new District Plan doesn't allow for anyone to harvest Kanuka/Manuka for firewood. If the District Plan is implemented without changes our farm will quickly revert to the 1966 photo. We need to maintain the grass area on our property to keep the farm productive.

Regrowth

Without a policy for controlling Kanuka/Manuka these seedlings will quickly become trees.  
Sustainable harvesting is the only way to control Kanuka/Manuka.

1 Standard wheelbarrow is 1/10 of a cubic meter

1 Cubic Meter

Our family burns 1 wheel barrow load per day from May to September approximately 120 days, we need 12 Cubic meters of firewood Per annum. This amount doesn't include a pizza oven & outdoor fire.
