

29.1 HAZARDOUS SUBSTANCES AND GENETICALLY MODIFIED ORGANISMS DISTRICT WIDE ACTIVITY

29.1.1 INTRODUCTION

Hazardous substances are used in a wide range of activities occurring within the Hastings District, from dry-cleaning clothes, manufacturing industrial products, to controlling pests and plant diseases in the agricultural sector. The use of hazardous substances creates the potential for adverse effects on human health, property or the natural environment. The potential for adverse effects can be exacerbated where the hazardous facilities are located adjacent or near to particularly sensitive environments, such as the Heretaunga Plains Unconfined Aquifer or where used or stored in large quantities.

This section of the District Plan also addresses the issue of the release of Genetically Modified Organisms (GMOs) within the District. The outdoor use of GMOs can have adverse effects on people, communities, tangata whenua, social and cultural wellbeing, the environment and the economy. The introduction of these provisions to the Plan reflects the level of control desired by the community to manage the effects of GMO land use activities. Through community input into the preparation of the Plan, the adoption of provisions to do with the management of GMOs was identified as important to the District's food producers. As a group they have highlighted concerns regarding the District's international reputation and marketability associated with GMOs. To counter this approach, during the preparation of this Plan no evidence has been provided by GMO proponents that there will be a GMO market ready within the next ten years (life of this plan). Council's decision to introduce these provisions around the land use management of GMOs is therefore based on a preferred level of environmental risk management determined by the Hastings community. A precautionary approach to the management of GMOs has therefore been adopted. The application of a precautionary approach will mean that Release or Field Testing of any GMO even where the prior approval has been obtained from the Environmental Protection Agency (EPA) is prohibited, so as to avoid the risks of potential adverse effects. This framework does not preclude laboratory testing from being carried out and other technologies from being investigated that may improve production. It is recognised that the community's attitude may change and/or there may be future GMO development opportunities that could result in a net benefit to the District and where the effects can be satisfactorily managed. For this reason a review policy has been built into these provisions to ensure regular consideration of new information on the benefits and/or adverse effects of a GMO activity which might become available.

The use of hazardous substances and genetically modified organisms in New Zealand is primarily managed by the Hazardous Substances and New Organisms Act 1996 (HSNO). The purpose of the HSNO Act is to 'protect the environment, and the health and safety of people and communities by preventing or managing the adverse effects of hazardous substances and new organisms'. The HSNO Act is administered by the Ministry for the Environment and implemented by the Environmental Protection Authority. The new Ministry of Business, Innovation and Employment is also involved with enforcement in terms of hazardous substances.

Hazardous Substances

The HSNO Act provides the general framework for controlling hazardous substances during their entire life-cycle. Requirements apply from manufacturing or importing a substance, through its use, to disposal. This 'cradle-to-grave' approach is intended to ensure that the specific adverse effects posed by hazardous substances are managed consistently and comprehensively.

The Resource Management Act 1991 (RMA) provides scope for additional controls for hazardous substances located on particular sites. Through Section 30 and 31, Regional and District Councils share the function of:

The control of any actual or potential effects of the use, development, or protection of land, including for the purpose of -

- i) *the prevention or mitigation of any adverse effects of the storage, use, disposal, or transportation of hazardous substances.*

On the basis of Ministry for Environment advice the Hastings District Plan takes the approach that hazardous facilities are generally managed adequately through the HSNO Act. Compliance with this legislation will generally ensure that any adverse effects arising from an accident or incident will be internalised within the hazardous facility site. The District Plan therefore seeks to avoid any duplication of regulation with the HSNO Act. An extra layer of protection can however be applied appropriately under the RMA to particularly sensitive environments or in relation to major hazardous facilities, in order to further minimise the potential for adverse effects impacting on the environment or the community. In the case of the Hastings District, the Heretaunga Plains Unconfined Aquifer is considered to be a sensitive environment, while major hazardous facilities will be assessed as to their appropriateness via the resource consent process.

Genetic Modification

The HSNO Act requires that before any GMO can be imported into the country, developed in containment, tested in the field or released into the environment, approval must be obtained from the Environmental Protection Authority (EPA).

Similar to the management of hazardous substances, the RMA provides the scope for District Plans to place additional controls on the use of GMOs, if that control can be justified under Section 32 of the RMA. It is considered that the prohibited status for all GMO land use activities is necessary to reflect social and cultural expectations that Hastings will remain a GM-free District. GMO activities are unacceptable given current social and cultural attitudes among the Hastings community and it is important for the District Plan to reflect the community's expectations. As the Council has adopted a prohibited status for the Release and Field Testing of all GMOs, while approval could be sought and obtained from the EPA their use would unable to be carried out within the Hastings District.

29.1.2 ANTICIPATED OUTCOMES

It is anticipated that the following specific outcomes will be achieved:

- HSAO1** Avoidance of the potential effects to the community and the environment from the use, storage and transport of hazardous substances.
- HSAO2** There is no unnecessary duplication of regulation between the Hazardous Substances and New Organisms Act 1996 and the District Plan with regard to the regulation of Hazardous Substances.
- HSAO3** Activities utilise hazardous substances where necessary for their operations, in appropriate locations.
- HSAO4** Avoidance of the potential effects from the 'release' or 'field testing' of Genetically Modified Organisms (GMOs) on the community.

29.1.3 OBJECTIVES AND POLICIES

OBJECTIVE To protect the community and natural environment from the adverse effects associated with HSO1 Relates to the manufacture, use, storage or transportation of hazardous substances.

Outcomes

HSAO1 and

HSAO2

OBJECTIVE To enable activities to utilise hazardous substances where necessary for their operations, HSO2 Relates to in appropriate locations.

Outcome HSAO2

POLICY HSP1 To ensure that activities are able to utilise hazardous substances in compliance with relevant

Relates to regulation as necessary to their operation, without being compromised by 'reverse sensitivity' (that is, by residential or other sensitive activities moving closer and seeking higher amenity levels, including reduced risks from hazardous substances).

Explanation

It is accepted that, provided the use of hazardous substances is undertaken in accordance with HSNO and other relevant regulation, there will be no undue risk to the community. The land use interfaces surrounding existing hazardous facilities need to be managed to ensure that these activities are not compromised by more sensitive activities establishing in close proximity (reverse sensitivity). This policy will be particularly applicable in the case of residential development or other sensitive land uses seeking to establish in proximity of existing activities utilising hazardous substances. This policy does not apply to existing situations where industrial or commercial activities utilising hazardous substances and residential zones or activities are located in close proximity to each other.

POLICY HSP2 Ensure that major hazardous facilities are appropriately sited and managed in order to reduce

Relates to risks to the environment and community.

Explanation

Major hazardous facilities have the ability to adversely affect the environment and community if they are not appropriately sited and/or managed. HSNO and associated regulation aims to internalise the effects of hazardous substances to within the site/building they are located on. However, through deeming all major hazardous facilities a Discretionary Activity, it will allow Council the discretion to determine whether proposed locations and methods of risk management are appropriate. This includes opportunity to consider risks to neighbouring property and the community from fire or natural hazard events affecting the hazardous facility.

OBJECTIVE To avoid any unnecessary duplication of regulation between the Hazardous Substances and

HSO3 Relates to New Organisms Act 1996 and the District Plan.

Outcome HSAO3

POLICY HSP3 To not regulate the use, storage or transportation of hazardous substances, in the District Plan

Relates to where adequate levels of community and environmental protection is already provided by the Objective Hazardous Substances and New Organisms Act 1996 or other legislation and regulation.

HSAO3

Explanation

The previous District Plan contained a comprehensive hazardous substances regulation including rules requiring screening via the Hazardous Facilities Screening Procedure or HFSP. In the late 1990s the HSNO Act had not been fully implemented with transitional provisions still applying and there was belief that hazardous substances also required regulation under the RMA. Current advice from the Ministry for the Environment is that the HFSP is out of date and is a duplication of HSNO regulation. In addition to this the HFSP is difficult to use and was not often used in the assessment of activities under the District Plan. Given this there is a need for change in the management of hazardous substances under the District Plan and part of this change is to avoid the duplication of regulation. Notwithstanding this however, there is still the need to consider the potential impacts of major hazardous facilities and the appropriateness of their location with regard to community and environmental risk.

OBJECTIVE **To protect the community and their social, economic and cultural wellbeing and HSO4 Relates to environment from the adverse effects associated with the outdoor release or field testing of Outcome HSAO5Genetically Modified Organisms through the adoption of a precautionary approach.**

POLICY HSP4 *To adopt a precautionary approach to the management of Genetically Modified Organisms by prohibiting the field testing or release of a Genetically Modified Organism.*
Relates to Objective HSAO4

POLICY HSP5 *To adopt a resource management framework for the management of Genetically Modified Organisms (GMOs) that is District specific taking into account environmental, economic and social well-being considerations.*
Relates to Objective HSAO4

Explanation

In addition to the environmental risks associated with the release of GMOs, there are economic risks caused by the sensitivity of export markets for high value produce to potential GMO contamination. The export of high value produce is critical to Hastings District as one of New Zealand's most significant horticultural and viticultural areas; agriculture is also an important component of the District's economy. Providing for the wellbeing of the community by giving certainty in prohibiting the field testing or release of GMOs is therefore justified. It is considered that the prohibited status is necessary to reflect social and cultural attitudes amongst the Hastings community. This is founded on a 2012 Colmar Brunton survey that found 84% of respondents believe that Hawke's Bay should remain a GE free food producing region. Although regulating GMOs in the District Plan could be considered a duplication of the HSNO Act 1996, the Hastings District community in seeking a precautionary approach, has requested greater certainty than can be provided by HSNO.

POLICY HSP6 *To review the Plan provisions relating to Genetically Modified Organisms (GMOs), particularly if there is new information on benefits and/or adverse effects of a Genetically Modified Organism activity and/or there is a general community acceptance to the use of Genetically Modified Organisms that have proven to be safe and economically beneficial without adversely affecting the environment and the general social and economic wellbeing of the community.*
Relates to Objective HSAO4

Explanation

The necessity and relevance of the prohibited activity status for field testing and release of GMOs will be reconsidered at the next plan review. If in the meantime GMO use is proven to be safe and advantageous and the community is accepting that a precautionary approach is no longer warranted, then their prohibited activity status may be overturned by a plan change. This could either be in relation to GMOs in general, or to a specific GMO for which there is a demand for in the community and which poses a low risk with regard to adverse effects and to the economic viability of the production and marketing of GE free produce.

29.1.4 METHODS

The Anticipated Outcomes set out in Section 29.1.2 will be achieved and the Objectives and Policies set out in Section 29.1.3 will be implemented through the following Methods:

HASTINGS DISTRICT PLAN The Rules contained in the relevant Sections of the Hastings District Plan where land is affected by the Heretaunga Plains Unconfined Aquifer Overlay work to ensure that additional precaution is exercised in the use and storage of hazardous substances over the Heretaunga Plains Unconfined Aquifer, but generally acknowledge the HSNO Act as providing the appropriate regulation to manage the effects of hazardous substances.

A number of bylaws have provisions relating to risks from hazardous substances. Part 11 - Fire Control regulates the storage of combustible materials. Part 13 - Nuisances contains regulation surrounding offensive matter and refuse. Part 14 - Public Places covers the disposal and transportation of hazardous substances in public places. Part 16 - Refuse regulates the disposal of hazardous substances by Council collection and at Omarunui Landfill. Part 21 - Water Services regulates discharges, including trade wastes, hazardous substances, waste water and storm water into the Hastings District Council infrastructure and then into the receiving environments.

HSNO requires that hazardous facilities may require a location test certificate, approved handler test certificates and/or a stationary container test certificate, dependant on the type and quantity of hazardous substances held at a site.

The HSNO Act requires that when considering an application, the EPA must assess the environmental risks. It must examine issues such as the risk of an organism escaping from a laboratory or the risk of contamination of surrounding plants by pollen from GMOs. In the case of field tests, the EPA must require that they are carried out under strict conditions to reduce any potential risk to the environment. It must also ensure that genetic material is not released outside the field test site and that this material is destroyed once the test is finished.

OTHER LEGISLATION Other legislation that includes provisions relating to the use, storage, disposal or transportation of hazardous substances includes: the Building Act 1991, Health and Safety in Employment Act 1992, Land Transport Rule: Dangerous Goods 2005, Land Transport Rule: Dangerous Goods Amendment 2010 and the Civil Defence Act 1983.

The use, storage and transport of radioactive material is controlled and licensed by the Ministry of Health through the Office of Radiation Safety.

CODES OF PRACTICE AND NEW ZEALAND/ AUSTRALIAN STANDARDS A variety of Codes of Practice and New Zealand/Australian Standards covering various aspects of the hazardous substance industry have been developed by the relevant industries, often in association with local authorities, the Department of Labour, the Environmental Protection Authority or the Ministry for the Environment. Codes of Practice are an approved means of complying with HSNO and are designed to provide guidance on how to eliminate or minimise the risk associated with hazardous substances. A good example of this is the EPA approved code of practice "Management of Agrichemicals NZS 8409:2004".

COMPLIANCE AND MONITORING Monitoring will be undertaken to ensure that the conditions of resource consents are complied with. In general the appropriate authorities to direct complaints regarding the location or appropriate management of hazardous facilities to (aside from any relating to the rules or standards in this Plan section) will be the Environmental Protection Authority or the Ministry of Business, Innovation and Employment.

INTEGRATED MANAGEMENT Hastings District Council will work with the Hawke's Bay Regional Council, adjacent local authorities and other statutory agencies and industries where appropriate for the assessment and management of hazardous facilities.

HAWKE'S BAY REGIONAL COUNCIL The Hawke's Bay Regional Council (HBRC) also has involvement in the management of hazardous substances. The HBRC have responsibility for hazardous substances as they relate to the discharge of contaminants to air, water and land as defined by section 15 of the RMA. The HBRC will also have responsibility for the use, storage, and transportation of hazardous substances where these are associated with the control of the use of land of any river or lake under section 13 of the RMA. They also assist in the safe disposal of hazardous substances.

RESOURCE All territorial authorities are required to give effect to and enforce the requirements of the National
MANAGEMENT Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health
(NATIONAL (NESCS).
ENVIRONMENTAL
STANDARD These Regulations provide a nationally consistent set of planning controls and soil contaminant
FOR values, and ensure that land affected by contaminants in soil is appropriately identified and
ASSESSING assessed before it is developed -and if necessary the land is remediated or the contaminants
AND MANAGING contained to make the land safe for human use.
CONTAMINANTS
IN SOIL TO Resource consent information and monitoring data can be collated to inform the identification of
PROTECT land affected by contaminants in soil.
HUMAN
HEALTH)
REGULATIONS
2012

29.1.5 RULES

The following table sets out the status of activities involving hazardous facilities:

RULE TABLE 29.1.5 - HAZARDOUS SUBSTANCES AND GMOs		
RULE	LAND USE ACTIVITIES	ACTIVITY STATUS
HS1	The Storage, Handling or Use of Hazardous Substances in areas other than within the Heretaunga Plains Unconfined Aquifer Overlay (excepting Major Hazardous Facilities).	P
HS2	Activities involving Genetically Modified Organisms that are not classified as Field Trials or Releases and any activity involving Genetically Modified Organisms which involve research within contained Laboratories or in Medical and Veterinary Applications.	P
HS3	Major Hazardous Facilities	D
HS4	The outdoor Release of Genetically Modified Organisms	Prohibited
HS5	Outdoor Field Trials of Genetically Modified Organisms	Prohibited

29.1.6 SPECIFIC PERFORMANCE STANDARDS AND TERMS

This Section is intentionally blank.

29.1.7 ASSESSMENT CRITERIA - DISCRETIONARY ACTIVITIES

For Discretionary Activities, the following criteria identify those matters which Council may assess the activity against. However, for Discretionary Activities, Council's assessment is not restricted to these matters.

29.1.7A 1. RISK ASSESSMENT

A risk assessment shall be provided, focussing on the following issues:

- (i) Assessment of the probability and potential consequences of an accident leading to the release or loss of control of hazardous substances. This assessment should focus on the ability of the design and management of the site to avoid accidents, such as spill containment measures, fire safety and fire water management, emergency management, site drainage and off-site infrastructure (e.g stormwater drainage system, sewer type and capacity) and the disposal of waste containing hazardous substances.
- (ii) Potential risk and effect on people and neighbouring activities, with emphasis on sensitive activities such as residential zones, educational facilities and community facilities.
- (iii) Potential risk and effect on natural ecosystems and the life supporting capacity of land and water, including the Heretaunga Plains Unconfined Aquifer, waterbodies and sources of potable water.
- (iv) Potential risk and effect on sites of significance to Tangata Whenua, sites of historical or archaeological significance, Recommended Areas for Protection, Outstanding Natural Features and Landscapes or Significant Landscape Character Areas.
- (v) The potential for natural hazards to impact on the operation of the hazardous facility.
- (vi) The potential for cumulative adverse effects of hazardous substances.

2. ALTERNATIVE LOCATIONS

The inclusion of evidence that alternative locations for the activity have been considered, having particular regard to locations both within the sites and outside of the site.

3. DISTRICT PLAN

Consistency with the Objectives, Policies and Methods of the relevant Zone and of Section 29.1.3 of the Hastings District Plan.

4. RECORD OF EXISTING ACTIVITY

The record of compliance and acceptable risk management of any existing activity where expansion of an existing activity is proposed.
